

Abstract**Secure WEB Access via an Original CD**

- 5 A system for securing an access to a predetermined area of a target server uses a copy protected record carrier comprising an information file, which comprises a project identifier and/or an address of an authentication server with which an application using said information file can communicate so that the authentication server can initiate and confirm a connection between a computer
- 10 on which said application is started and said predetermined area of said target server that is identified by the authentication server and/or the project identifier.

(54) Title: SECURE WEB ACCESS VIA AN ORIGINAL CA

(57) Abstract: A system for securing an access to a
predetermined area of a target server uses a copy pro-
tected record carrier comprising an information file,
which comprises a project identifier and/or an address
of an authentication server with which an applica-
tion using said information file can communicate so
that the authentication server can initiate and con-
firm a connection between a computer on which said
application is started and said predetermined area of
said target server that is identified by the authentica-
tion server and/or the project identifier.
